MASTER DISEASE INDEX: A–C

National Rare, Genetic, and Common Disease Registry

Foreword on the 7,000+ Registry: The global medical consensus recognizes approximately 7,000 to 8,000 distinct rare and genetic diseases, in addition to standard communicable and non-communicable conditions. In India, the *National Policy for Rare Diseases* categorizes these based on treatment availability. Because an unabridged 7,000-item dictionary requires a multi-volume encyclopedia, this document represents a **Maximum-Density Foundation Index**, capturing hundreds of the most critical conditions documented in clinical epidemiology.
